## TRENDLINE

*Modern design*

*Unlimited fabric variety*

*Maximum stability*

## Only the best side of the sun

*TRENDLINE* awnings are all about life with style. *WO&WO*'s new trend product vouches for top quality. The future belongs to Italian design and clear-cut lines, whose popularity gradually supersedes the round shapes of recent years. Harmonising with contemporary architectures as well as design trends of the future, these new awnings deliver exactly what their name promises.

## The principal feature **strong arms**

The principal feature of the *TRENDLINE* range is the articulated arm with a length of up to 3500 mm. More than 70,000 guaranteed movement sequences of the "multiflex" power belt and a double spring in the *TRENDLINE* arm guarantee optimised long-lasting tautness of the fabric.

### **!** TIP INCLINATION ADJUSTMENT

This option for the *TRENDLINE* range is an ideal supplement for awnings that point westward and for adjustments to the low sun in late summer. With the hand crank, it is very easy to set the desired inclination for each arm separately. A spirit level fitted to the fall bar allows an even adjustment of both articulated arms.

Experience

## design and function

CE to EN13561

5 YEAR GUARANTEE

Like all our awnings, the *TRENDLINE* range is TÜV and CE tested. High-quality and corrosion resistant materials and coatings make for a durable product (5-year warranty) that lets you enjoy every ray of sunlight.

### *TRENDLINE*

Top quality technology and materials mean that *TRENDLINE* is a quality product. Even the basic model, the open *TRENDLINE*, features extras such as infinitely variable inclination adjustment and more projection than width. In addition, a rain protection roof can be fitted to protect the awning.

### *TRENDLINE CASSETTE*

The attractive aluminium cassette protects both the fabric and the articulated arms of the *TRENDLINE CASSETTE* against environmental influences. With its slim, modern design and timeless elegance, the *TRENDLINE CASSETTE* commands an exceptional status in the awning market.

# Multifunctional design highlight

Have a look at the WO&WO range with a trained specialised retailer – a wide choice of colours, designs and fabrics such as acrylic, Polyester and PVC is waiting to be discovered!

## UV protection

Acrylic fabrics are high-quality awning fabrics incorporating several supporting fabrics that make them ideal for demanding outdoor applications. The UV protection of the fabrics according to UV Standard 801 ranges from factor 40 to 80.

## Self-cleaning

swela@sunsilk SNC is a high-tech polyester fabric. The material offers superb properties such as nano-surface finishing with self-cleaning effect, a UV block to protect the human skin and the fabric, as well as improved winding. On top of it, it is extraordinarily durable.

In addition to choosing the fabric for the awning, you can also decide what you want your valance to look like. We offer a choice of 6 different valance types and many different colours for the borders (see right).

Colour of the border

Easy-Clean

All-Weather

## Textiles with added function

### TexGard - Easy-Clean

Special textile finishing gives the product a series of useful properties. This includes low dirt absorption of the fabrics, high water repellence and reduced surface tension. Due to the special material fixing system, this effect is also extremely long-lasting. Moisture, water and dirt are kept out as much as possible.

### All-Weather

The All-Weather quality is a fabric made of spinning-nozzle coloured acrylic with a coating on one side, combining optimum protection against the sun with protection against a drizzle or light rain.

### Eco-Tex Standard 100

Eco-Tex Standard 100 is a testing and certification system which ensures that textile products fall within the safety limits for specific harmful substances.

### Prevent overheating

Use an awning to reduce solar radiation and stop your home from overheating.

### Frame colours

A wide choice of colours is available not only for the fabrics, but also for the frame. If the four standard colours, i.e. white (RAL 9010), light ivory (RAL 1015), silver (RAL 9006) and dark grey (RAL 7016M), do not satisfy you, we also offer 210 additional RAL colours!

RAL colour charts are available from:  
RAL Deutsches Institut für Gütesicherung und Kennzeichnung  
e.V. ([www.RAL-Farben.de](http://www.RAL-Farben.de))

## Heater & light ramp

Just because it is getting dark, there is no need to go inside. Just fit a light ramp and a terrace heater (infrared heat) to your awning and enjoy the evening on your terrace.

## Rain protection hood

The rain protection hood huddles against the cloth roller, covers and protects the mechanical elements and thus provides sufficient protection against the wet.

Wall mounting

## Installation & operation

Folding arm awnings by WO&WO offer many installation options and are perfectly capable of adapting to different situations. For instance, you can mount your awning on the wall, underneath the ceiling or on the rafter.

Choose one of three operation options. Operation with a crank is standard – however, you can also control your awning with a motor or a remotely controlled motor.

crank

230 V motor

radio controlled motor

The shaded surface underneath the awning depends on the current position of the sun. Especially if the sun is low and/or on western façades, a small awning projection will result in insufficient shading. However, increasing the projection or the angle of inclination can correct this and ensure that the requirement to achieve optimal shading is fulfilled.

High sun  
e.g.: Southern façade

Low sun  
e.g.: Western façade

### ! TIP FOR UNTARNISHED JOY

As a general rule, only experienced specialists should install WO&WO products. Unless this prerequisite is fulfilled, you cannot make any claims under the statutory two-year warranty.

Rafter mounting

Ceiling mounting

## Safely comfortable

Light and shade at the push of a button – the motorised drive is not just convenient, but also protects your awning against damages caused by excessive wind loads.

Upgrade your awning by integrating the pinnacle of convenience in your system. All awning functions can be remotely controlled (optional). A pleasant side effect is that you do not need any cables between the awning and the control unit.

### ! TIP SAFETY AND COMFORT WITHOUT PRESSING A BUTTON

The wind/sun sensor constantly measures the current intensity of the sun and the wind speed. When the sun shines, it deploys your awning automatically, if the wind is too strong, it retracts the awning automatically to protect it.

### ! TIP UNAFRAID OF STORMY WEATHER...

Awnings have to be protected from excessive wind. The remote wind sensor Eolis 3D WireFree RTS offers an inconspicuous and simple solution. The innovative sensor measures the oscillations of the awning. If there is a wind alarm, it automatically generates a remotely transmitted command to retract the awning. In this way, your awning is reliably protected.

# WO&WO lets the sun shine for you

Our passion is to let precious sunlight into your home in a controlled manner so that you really feel the full benefit of "your" sun. WO&WO's tailored sun blind products transform your home into your personal sunny paradise.

The product range of WO&WO includes all articles for modern internal and external sun blinds and visual screens such as terrace awnings, façade awnings, roller shutters, venetian blinds, window shutters, external and internal blinds, pleated blinds, roller blinds, panel curtains, vertical blinds and insect screens.

## Internal sun blinds

The amount of light that enters a building can be controlled and optimised in many different ways. How this is achieved in a particular situation is partly a question of personal taste, but it also depends on the individual requirements: Do you want a transparent element or do you want it to darken the room? Should it consist of metal or fabric? There are no limits to your imagination!

## External sun blinds

An awning creates additional living space. It also decorates the house. Modern architecture increasingly relies on external systems for light control, such as venetian blinds, that provide excellent protection against the weather and act as a visual screen at the same time.
