ZIPLINE

*The Vertical Awning
with Zip System*

The Vertical Awning with the Proven Zip System

The ZIPLINE is no ordinary vertical awning: With the zip system come considerable advantages, such as increased wind stability and no gaps at the sides. It represents the perfect combination of function and harmony. Trendy and classic materials provide colourful accents and create a delightful ambience in the space. But the ZIPLINE also helps to keep insects away. The zip system and additional sealing profiles in the awning box and fall bar keep insects outside for sure!

to EN13561

Experience Quality from WO&WO

Like all of our awnings, the ZIPLINE is CE tested too. High-quality, corrosion-resistant materials and coatings are your guarantee for a durable product.

Limit Dimensions & Box Sizes

The ZIPLINE is available in two different box sizes, (95 mm and 120 mm) – depending on the area to be shaded. At the same time, the box fits perfectly in the overall dimensions of any building frontage.

Maximum sizes:

ZIPLINE 95: 3000 x 2500 mm

ZIPLINE 120: 5000 x 3000 mm

(depending on choice of material: screen, Soltis and acrylic)

The Zip System

A zip system is built into the side borders of the material. When the curtain is lowered, the zip runs into the guide rails. This is the decisive advantage over conventional façade awnings: since not only the end bar but also the curtain itself are enclosed in the guide, there are no gaps at the sides. The material and the mechanism form a single unit, which is considerably more wind-resistant than in other products. It also means that ZIPLINE does not cast moving shadows in strong winds.

! TIP „SUNROOM“

With the ZIPLINE as a lateral shade, you can easily make a „Sunroom“ with a pergola awning (such as the PERGOLINE from WO&WO). This enables you to increase the living area of your house or flat so you can spend more time outside without worrying about wind and weather.

! TIP INSECT PROTECTION

The zip system does away with gaps at the sides, so when the curtain is lowered the ZIPLINE provides more than a privacy screen. Yet another plus point: Protected all round by the additional fitting of sealing profiles, the ZIPLINE also serves as an insect screen, reliably preventing access by any and all insects!

Installation and Operation

The ZIPLINE is equipped as standard with motorised operation. Of course, smaller systems can also be operated with a hand crank. A remote controlled motor, available as option, provides even greater convenience. You can install the ZIPLINE directly on the window frame, in the window reveal, or offset from the window.

! TIP SUN AND WIND GUARD

Whether you are at home or out and about, a sun and wind guard fitted on your house front measures the current wind speed and sunlight intensity. If the wind becomes too strong, the curtain is retracted automatically, when the sun shines, it is lowered automatically.

Textiles

We recommend fitting the ZIPLINE with a fibreglass screen.

Fibreglass screen

This material is an excellent thermal insulator and keeps out as much as 97% of solar energy when fitted outside. Because of its diagonal fabric structure, a fibreglass screen also reduces annoying glare. Thanks to its excellent mechanical properties it is always at the perfect tension.

PVC - Soltis®

Soltis® fabrics offer greater natural light, exceptional transparency, and thus a clearer view of the outside. Soltis materials are also highly weather-resistant and can stand up to all variations in the weather without becoming damaged or losing their smooth finish and UV protection properties

UV-protection

Acrylic materials are high-performance awning fabrics to which a series of coatings are applied, and are therefore ideal for use in demanding outdoor environments. The materials provide a UV protection factor from 40 – 80 according to UV standard 801

TexGard - Easy-Clean

A special finishing process lends the fabric beneficial properties. These include low dirt absorption, good water repellent qualities and lower surface tension.

The unique method by which the material is fixed also ensures that this effect is remarkably durable, providing the best possible protection against penetration by moisture, water and dirt.

Structure colours

ZIPLINE can be ordered in all

RAL colours as standard.

The RAL CLASSIC colour fan is reproduced here with the permission of RAL GmbH, Sankt Augustin. The designation RAL is protected by trademark law.

WO&WO lets the sun shine for you

Our passion is to let precious sunlight into your home in a controlled manner so that you really feel the full benefit of "your" sun. WO&WO's tailored sun blind products transform your home into your personal sunny paradise.

The product range of WO&WO includes all articles for modern internal and external sun blinds and visual screens such as terrace awnings, façade awnings, roller shutters, venetian blinds, window shutters, external and internal blinds, pleated blinds, roller blinds, panel curtains, vertical blinds and insect screens.

Internal sun blinds

The amount of light that enters a building can be controlled and optimised in many different ways. How this is achieved in a particular situation is partly a question of personal taste, but it also depends on the individual requirements: Do you want a transparent element or do you want it to darken the room? Should it consist of metal or fabric? There are no limits to your imagination!

External sun blinds

An awning creates additional living space. It also decorates the house. Modern architecture increasingly relies on external systems for light control, such as venetian blinds, that provide excellent protection against the weather and act as a visual screen at the same time.
