

The background is a dark, monochromatic composition of geometric shapes and textures. It features a central point where two surfaces meet, creating a sharp, dark shadow. The surfaces have a fine, grainy texture. On the right side, there are several dark, triangular shapes that appear to be part of a larger structure, possibly a roof or a piece of machinery. The overall mood is industrial and architectural.

sunbreaker

The above prices should be increased by the motor price.

**Blade types:** There are A and B blade types. Both types are made from extruded aluminium 210mm high. Blade type A is always equipped with universal end caps. Blade type B can be equipped with universal or B type end caps.

**Width:** Means total width of the product, measured from one external side of side guide to the external side of the second side guide (along the blades). Maximum width is 4000mm.

**Height:** Means the height of the side guides. Maximum is 6020mm. It is possible to make modular connections.

**Plastics:** All plastic components used in the system are available in two colours: grey and black.

**Section:** Distance from axis to axis between the blades. Section size is 200mm.

**Colours:** Painting construction in colours from SELT palette (page 98) included in price.

- realization time c. 2-3 weeks from starting the production

Painting in other colours from RAL palette:

Surcharge for painting and realization time are settled individually.

**Drive:** Blade angle can be set using manual or electric drive (recommended). Standard drive placement is the third blade counting from the bottom, but it is possible to choose different place (on request). For blades positioned vertically, it is recommended to install the drive in the middle of the lower side guide in order to ensure even closing of the blades.
